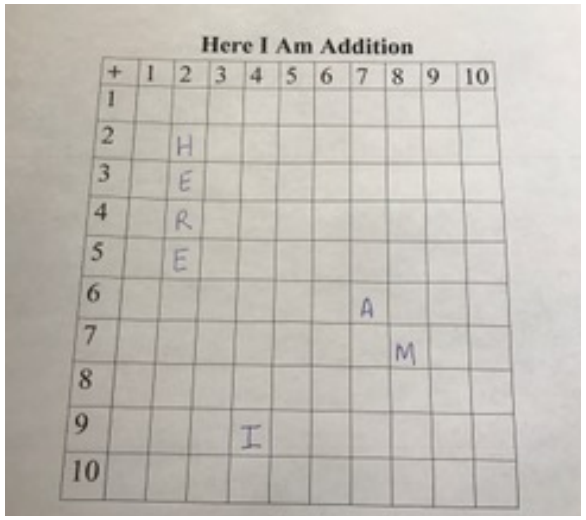
Directions for Here I Am Addition

1. This game can be played as a whole group, teacher-led game.

2. Hide the words HERE, I, AM, on the game board (as you hide the ships in the game Battleship). The letters in each word must be hidden in adjacent boxes vertically, horizontally, or diagonally. The words can be placed anywhere on the game board. (Think of the words as the different ships) See a sample of how the words might be hidden below.



3. The teacher projects an empty game board on the board.

4. The game begins when one person tries to find a word by saying the addition fact with the correct answer that corresponds to a box they are trying to check on. They should say the number along the side first and the number across the top next. For example: if a student said 9 + 4 = 13, the teacher would say "hit, 9 + 4 is 13" and they would write the "I" in the corresponding box. If a student were to guess "4 + 5 = 9", the teacher would say "4 + 5 is 9" and write a 9 in the box, meaning it was a correct answer but a miss.

5. The game continues on in this way until all the words have been found (and sunk).
