

Analyzing Math Games

Game:	Unit (location):
Primary Mathematical Focus:	
What are other strategies, properties, etc that can be focused on within the game?	
How could the game be altered to offer differing levels of content and/or strategies focus?	
What questions might you ask students as they are playing the game to help them be explicit about the mathematical focus of the game?	
What instruction could you provide as follow up to the game to ensure students get the optimum mathematical benefit from the game?
