

Learning Trajectories:

A research lens for enhancing
formative assessment.

Caroline B. Ebby, CPRE, University of Pennsylvania cbe@gse.upenn.edu

Take Aways

- ◆ Effective math instruction and planning for instruction requires careful attention to evidence of student thinking.
- ◆ Using learning trajectories/progressions to understand evidence of student thinking provides actionable information based on research on how students learn specific mathematics concepts
- ◆ The “essence” of formative assessment is the relentless attention to evidence of student understanding and intentional and systematic use of the evidence for planning and instruction. (Popham, 2012)

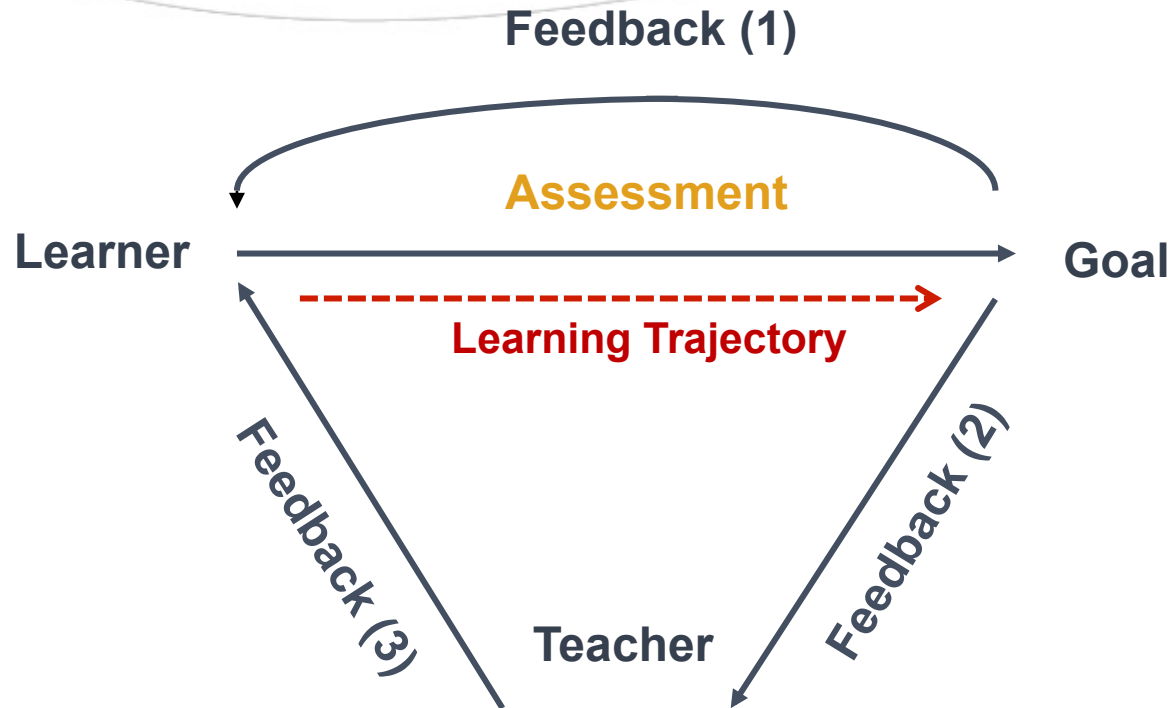

Formative Assessment

Learning Trajectories

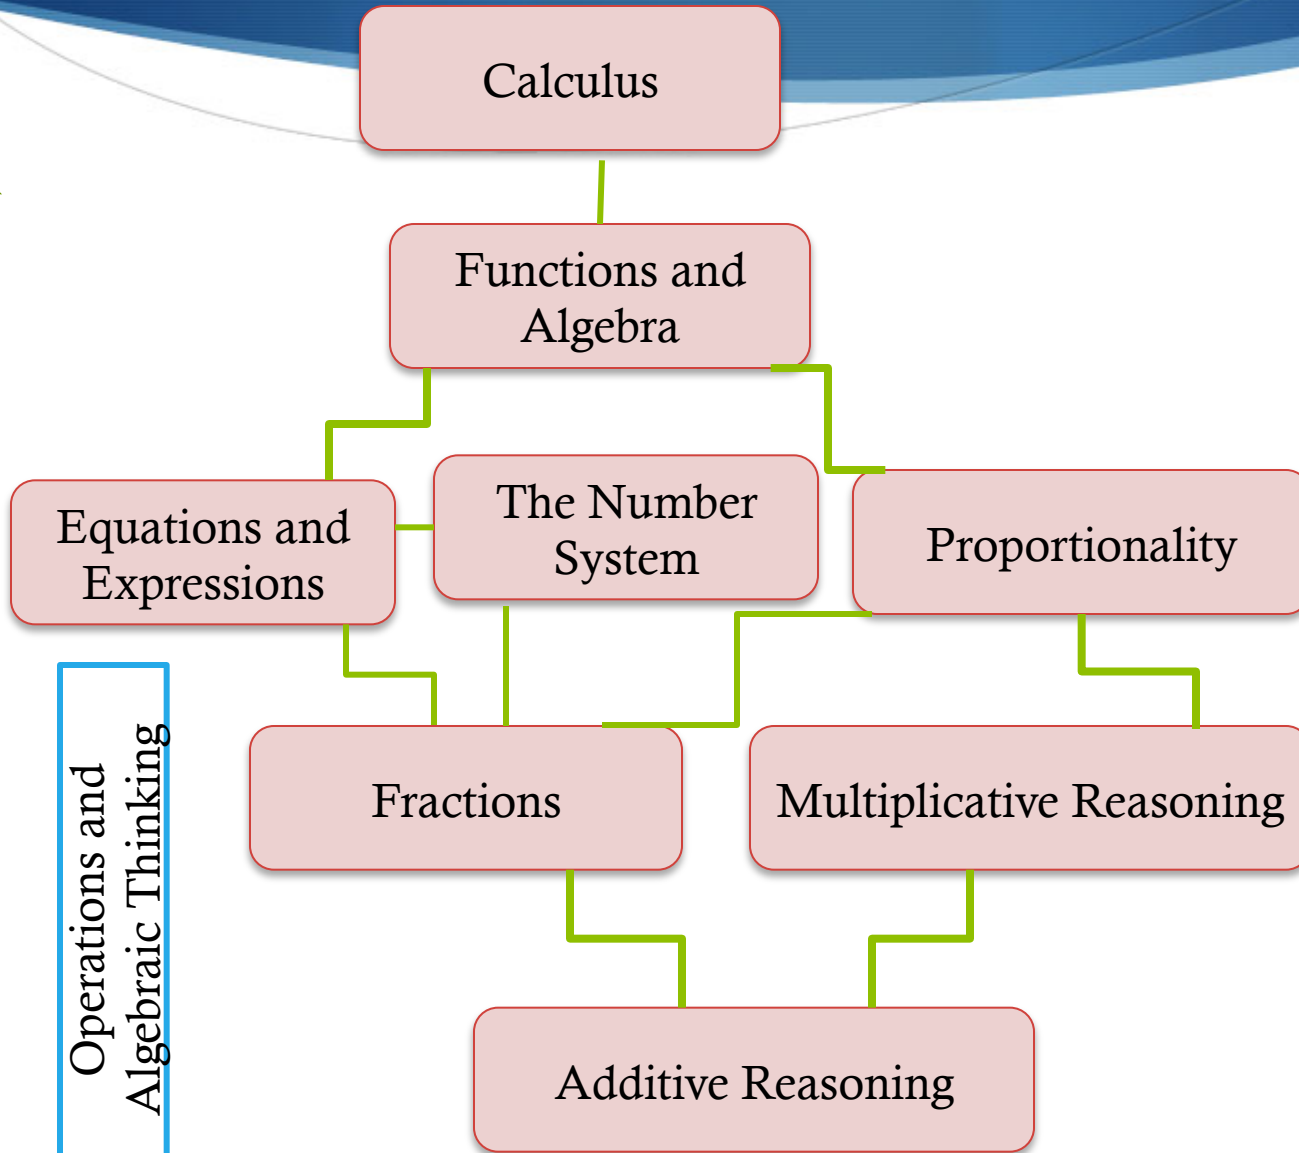

- ◆ “Learning progressions are descriptions of the successively more sophisticated ways of thinking about a topic that can follow one another as children learn about and investigate a topic” (NRC, 2007, p. 214)
- ◆ Developmental progressions of strategies, concepts and levels of student thinking in particular mathematical domains
- ◆ Links research on learning and instructional practice

What do you notice? Make some observations

An Example: The OGAP Multiplicative Reasoning Progression

Multiplicative

Multiplicative Strategies

Algorithms	Distributive Property	Associative Property	Doubling & Halving
$\begin{array}{r} 16 \\ \times 42 \\ \hline 12 \\ 20 \\ 240 \\ \hline 400 \\ 672 \end{array}$	$4 \times 16 = 4(10 + 6)$ $= 4(10) + 4(6)$ $= 40 + 24$ $= 64$	$(8 \times 2) \times 5 = 8(2 \times 5)$ $= 8 \times 10$ $= 80$	$16 \times 4 = 8 \times 8$ $= 64$
	Known or Derived Fact	Commutative Property	Powers of Ten
	$4 \times 6 = 24$	$16 \times 4 = 4 \times 16$	$5 \times 400 = 5 \times 4 \times 10 \times 10$

Transitional

Transitional Strategies

Early Transitional Strategies

Additive

Additive Strategies

Early Additive Strategies

Non-Multiplicative Strategies

- Adds or subtracts factors
- Models factors incorrectly
- Guesses
- Uses incorrect operation
- Not enough information
- Uses procedures incorrectly

Underlying Issues/Errors

- Doesn't consider reasonableness of solution
- Error in: calculation, place value, vocabulary, property or relationship, equation, or model
- Misinterprets the remainders
- Units inconsistent or missing

Applies understanding of place value, properties, and relationships. Depending upon the strength of multiplicative reasoning students may move up and down between multiplicative, transitional, additive, and non-multiplicative strategies as they interact with different problem situations and problem structures (Kouba & Franklin, 1995; WMP OGAP, 2006).

Instructional Implications

Student A

One tricycle has three wheels.

A. How many wheels do 5 tricycles have? Show your work.

$$\begin{array}{r} 3+3+3+3+3= \\ \downarrow \quad \downarrow \\ 6+6+3=15 \end{array}$$

B. How many wheels do 29 tricycles have? Show your work.

$$\begin{array}{r} 9+9+9+9+9+9+9+9+9+9+6=77 \\ \downarrow \quad \downarrow \quad \downarrow \quad \downarrow \quad \downarrow \\ 18+18+18+18+15 \\ \downarrow \quad \downarrow \quad \downarrow \\ 36+36+15=77 \end{array}$$

OGAP

Version 2

Jan. 06

Student C

3.

One tricycle has three wheels.

A. How many wheels do 5 tricycles have? Show your work.

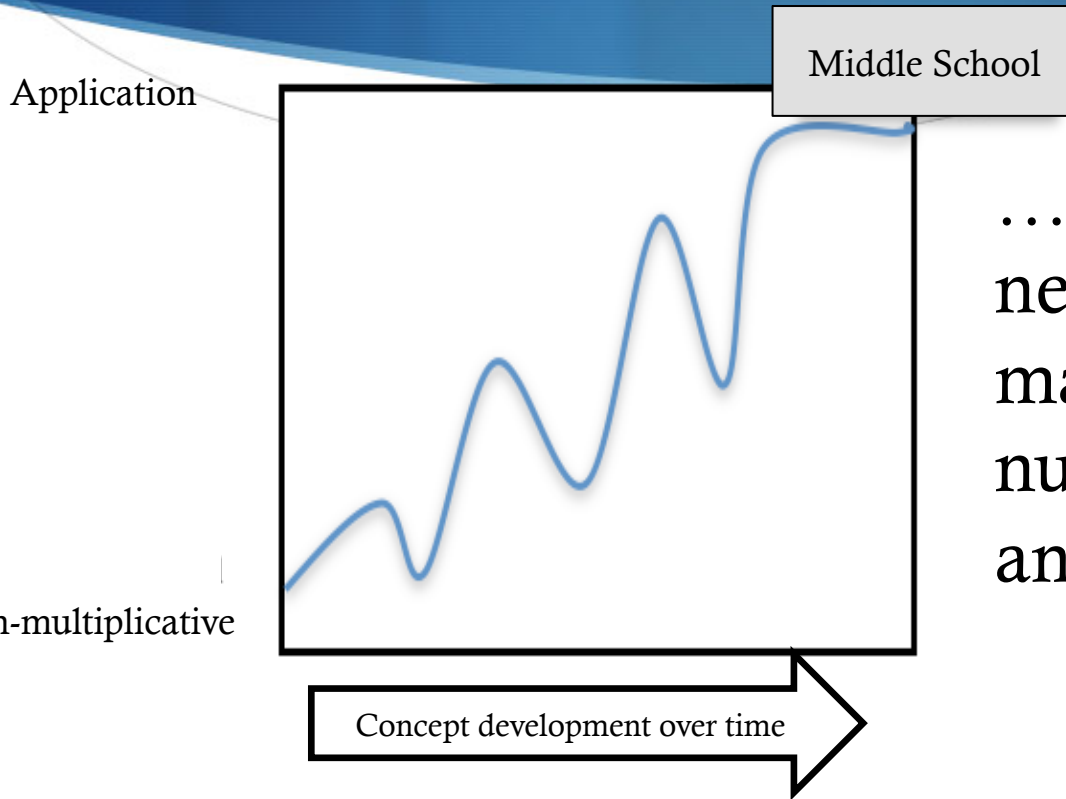

B. How many wheels do 29 tricycles have? Show your work.

May 5, 2005 Version 1.0

Students move back and forth...

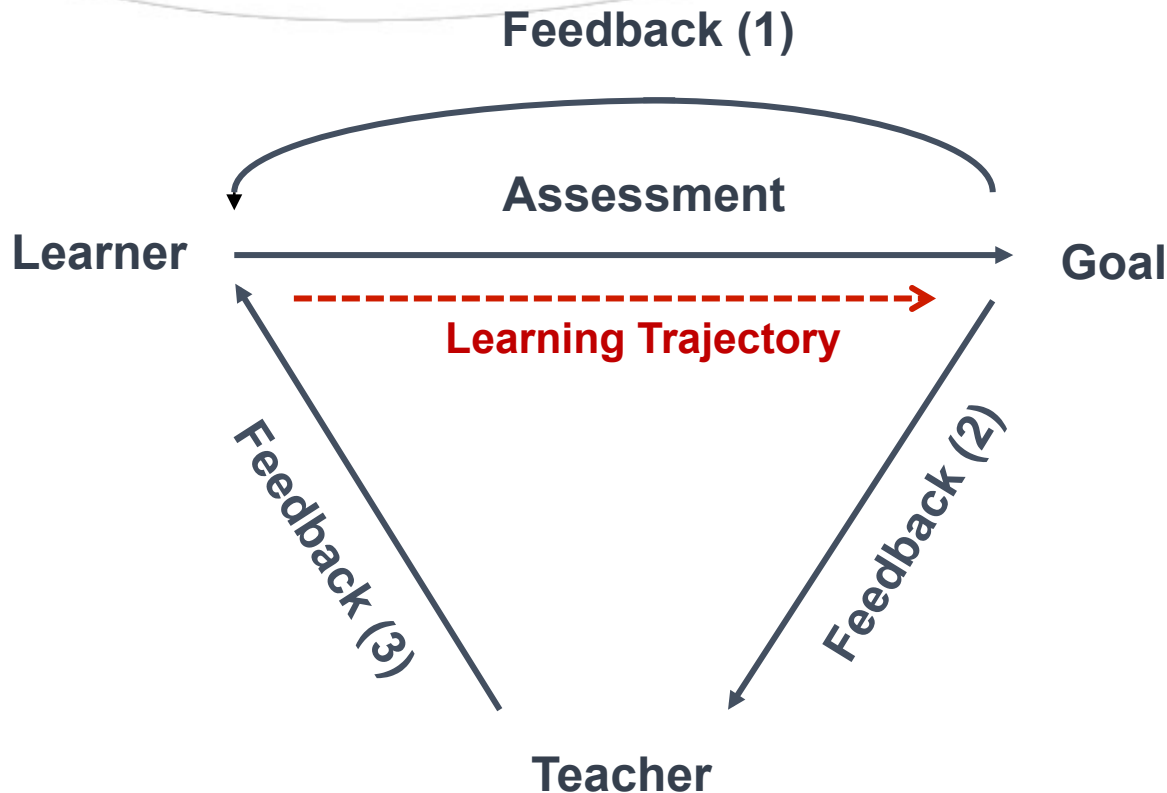

... as they interact with new contexts, different magnitude numbers, number of factors, and more.

Petit, Laird, Marsden, & Ebby, in press 2015

CCSSM

Grade	CCSSM Multiplicative Problem Situations (BOLD = new for grade level)	CCSSM Multiplicative Strategies
2	Equal groups	Repeated addition with an array
3	Equal groups, arrays, equal measures, beginning area Multiplication and division within 100 and 1 digit x multiples of 10 (e.g., 5 x 50)	Solve multiplication and division problems using <i>strategies based on place value and properties of operations</i> .
4	Equal groups, equal measures, multiplicative comparisons, measurement conversions within systems, area Multiply 1 digit x up to 4 digits, and 2 digits x 2 digits. Divide up to 4 digits by 1 digit numbers.	Solve multiplication and division problems using <i>strategies based on place value</i> (e.g., partial products, area models) and the <i>properties of operations and relationships</i> (e.g., commutative, associative, and distributive, inverse relationship between multiplication and division).
5	Equal groups, equal measures, multiplicative comparisons, measurement conversions between systems, area, scaling (multiplicative change) Fluently multiply whole numbers. Divide up to 4 digits by 2 digits.	Solve multiplication problems using <i>efficient strategies</i> (e.g., partial products, traditional algorithms). Solve division problems using <i>strategies based on place value</i> (e.g., partial quotients, menus, area models) and the <i>properties of operations and relationships</i> (e.g., commutative, associative, distributive, and the relationship between multiplication and division).
